

A Brown's Gas Hydrogen Based Fuel Enhancement Pilot Program

An Evolution of Carbon Fuel Consumption

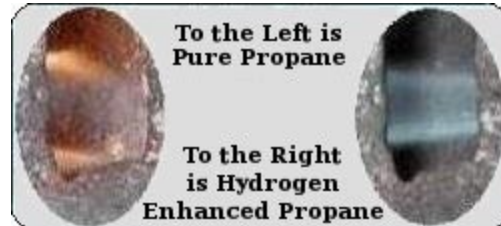

Water Fuel LLC - 18-15 215 street - Bayside, NY. 11360

A one week test Pilot Program is being launched for Coal-Fired Power Facilities. The program will utilize Brown's Gas to increase combustion efficiency, decrease fuel requirements, and ultimately mitigate net CO_x, NO_x, particulate, and smog emissions.. The Pilot Program will utilize two [2] 1600 liter per hour Generators that are suited for facilities that utilize sixteen [16] tons of coal or less per hour. The two [2] Brown's Gas generators will be provided by Water Fuel LLC, who will be contracted on a Consultant level to initiate and guide the development of the Pilot Program.

- Experimentation with Propane Fuel shows upwards of a 45% reduction in total fuel requirements, while maintaining an equivalent BTU production
- It is estimated that a reduction in coal requirements of one [1] ton per hour, in a sixteen [16] ton per hour Facility, can be achieved with use of the two [2] Generators
- The ROI is estimated at approximately 1 month
- The one [1] year savings of the sixteen [16] ton per hour power Facility, based on the cost of coal being \$25.00 per ton (as per IEA), is estimated at approximately \$250,000

(Above is a picture of Propane Experimentation)

Contact Water Fuel LLC for a formal letter of introduction to the Pilot Program. This viable concept is an opportunity to effectively increase the net profit of the Facility, while decreasing pollution emissions thus allowing for the easing of EPA compliance. Make your Facility the model Power Plant. Utilization of Fuel Enhancement methodology, and technology, in your Facility, will establish tremendous marketing potential. Be part of the future today with the Fuel Enhancement Pioneers: Water Fuel LLC!

Water Fuel LLC will provide the following during the Pilot Program at a one time cost of \$12,500:

- Two [2] Brown's Gas Generators producing thirty two hundred [3.200] liters per hour that will remain the property of Water Fuel LLC during and subsequent to the Pilot Program
- Water Fuel LLC will act as a Consultant, utilizing the two [2] Brown's Gas Generators to make determinations about the Coal-Fire Facility, inclusive of the quantity of Brown's Gas that will be required, for that particular Facility, to increase efficiency to a desired degree
- Water Fuel LLC can then be contracted to prototype and develop a Generator designed according to the implications of the Pilot Program
