Dr. Grow it all

Overview of Dr Grow It All™:

- (a) World's FIRST poultry -based organic liquid fertilizer
- (b) Certified ORGANIC by the USDA Bio-Preferred Program
- (c) Delivers a comprehensive range of elements in the correct pH neutral balance
- (d) Contains billions of beneficial bacteria/ microbes that help improve soil structure and increase organic matter
- (e) Produces higher yields with tastier fruits and longer shelf life
- (f) An effective and cheap source of nutrients for the home gardener, the hydroponic gardener, and broad-acre farmer alike
- (g) No burning of plants or seedlings
- (h) Improves plant ability to resist pests & diseases
- (i) One of the most affordable liquid organic fertilizers available!

Our next generation depends on us...

...and we depend
on
Dr Grow It All™

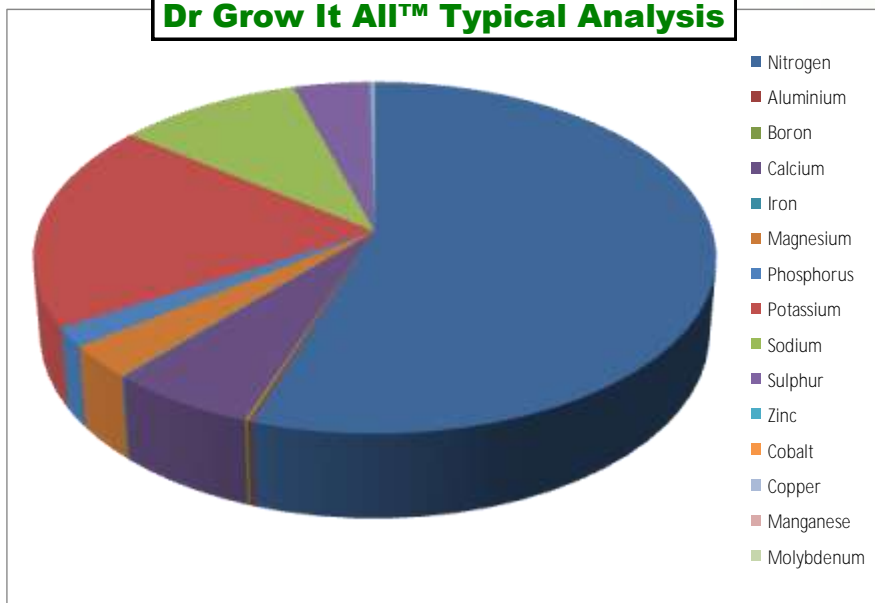

Dr Grow It All™ is a totally natural, organic and completely SAFE liquid fertilizer for your crops, your gardens and your family. Producing higher yields, tastier produce, no burning of plants, no risk of over-use and at a price your operation can afford...

Analysis & Product Usage:

Dr Grow It All™ Typical Analysis

Nitrogen	ppm	2607.50
Aluminium	ppm	12.25
Boron	ppm	9.19
Calcium	ppm	496.03
Cobalt	ppm	0.72
Copper	ppm	4.65
Iron	ppm	17.18
Magnesium	ppm	90.91
Manganese	ppm	1.08
Molybdenum	ppm	1.56
Phosphorus	ppm	48.05
Potassium	ppm	542.09
Sodium	ppm	257.55
Sulphur	ppm	315.98
Zinc	ppm	6.04

What is Dr Grow It All™?

Dr Grow It All™ is a complete natural, organic liquid fertilizer and soil conditioner that contains biological compounds, billions of beneficial bacteria, and a valuable microbe mixture that is environmentally safe.

What's in Dr Grow It All™?

Active Constituent: Conditioned Poultry Manure loaded with beneficial bacteria and natural stimulants to activate the growth of micro flora.

How do I use Dr Grow It All™?

Dr Grow It All™ can be applied through **manual watering** or **automatic drip irrigation** systems.

Suggestions for use on plants and various soil conditions:

- For **foliage spray**: dilute 1/2 oz (3 teaspoons) to one quart of water; for outstanding results apply at 2 day intervals.
- For **established planted areas**: dilute 3/4 oz (4 tspns) to 1 quart of water.
- For **quality composted soil or potting mix**: dilute 3/4 oz to 1 quart of water.
- For **prepared soil with compost**: dilute 3/4 oz to 1 quart of water.
- For **prepared soil without compost**: dilute 1 1/2 oz to 1 quart of water.
- For **virgin soil**: dilute 3 oz to 1 quart of water using a watering can.
- For **planted areas that have been treated with chemical or slow release fertilizer**: use Dr Grow It All™, sparingly at first.

Dr Grow It All

... vs ... "A Competitor"

- Closed loop system
- One organic product is successfully being used on ALL produce, grass, plants...
- Recycling bottles through the refill stations
- Organic
- Driving repeat customers back to store for refill, thereby assisting our retailers in their customer retention
- In use for over 10 years with ZERO problems reported
- By product is a soil conditioner
- Small Plant footprint of only 600sq ft that can produce up to 16000ltrs in 24hrs
- The liquid fertilizer has also been shown to be an effective soil conditioner
- In comparison to all other products, is cost effective—allowing the price of organic produce to fall

*...and that's just the top 10 reasons!
There are more—just ask us...*

Not a closed loop system

A different product required for each different application

Adding to the waste problem with a new bottle needed for each purchase

"A Competitor" is a synthetic fertilizer that contains ammonium phosphate and several other chemicals that can be toxic to your soil and plants. It is prohibited from use in certified-organic farming.

...we could go on, however the rest are self-explanatory...

Here's what the experts have to say:

Robert Parnes, Ph.D., says in his book 'Fertile Soil': "[Ammonium fertilizer] acidifies the soil, and thus it is probably more harmful to soil organisms than any other nitrogen fertilizer The application has to be timed carefully and placed properly to avoid burning the leaves and roots"

Long-term studies at the University of Wisconsin have shown that acidic chemical fertilizers are causing serious, permanent damage to our soils. Usually these fertilizers are also highly soluble, so they leach away and pollute our water systems, too. Soil fertility authority **Garn Wallace, Ph.D.**, of Wallace Laboratories in El Segundo, California, points out that "A Competitor" contains muriate of potash, which contains excess chlorine that will burn plants and inhibit the uptake of nitrogen. Dr. Wallace also warns that products such as "A Competitor" often contain unsafe levels of zinc and copper that will be toxic to soil life.

The synthetic chemicals you put on your course are absorbed through the skin of your players... and the skin of your employees...

Here's a SAFE alternative...

Dr Grow It All™ is a totally natural, organic and completely SAFE liquid fertilizer for your golf course, your gardens and your community.

Test Results:

Test results carried out using varying applications of the Dr Grow It All product have returned results far exceeding expectations of a liquid organic fertilizer.

With a delivery system through commonly used irrigation, flood and drip feed systems, the **Dr Grow It All™** brand does not need to utilise any other additional resource to deliver it, unlike other synthetic fertilisers which require added machinery and manpower to deliver its product.

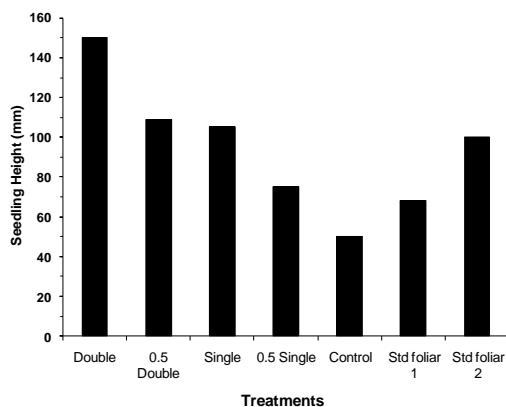

This unique formula that altered the hazardous nature of poultry waste delivered exceptional results, some of which include;

- higher yielding crops
- tastier fruits and vegetables
- no burning of seedlings
- healthier plants that can resist the natural pest and diseases,
- excessive application will not harm the crops,
- nutrients that are absorbed by the plants more quickly

However, the most unique property of this process was the introduction of a cultured bacteria which allowed the excess liquid organic fertiliser to condition the soil by bacteria combining with the micro organisms, multiplying them by the billions to constantly condition the soil, and bring the nutrients back into the soil naturally.

So, every time this product is applied, it is also conditioning the soil which is one of the significant achievements of this product.

The unique soil conditioning properties of this product with regular use and the new techniques and methods utilised in land management would also assist in curbing another environmental issue mentioned earlier, being soil erosion from intensive farming.

Independent Research Comments:

“The use of Dr Grow It All in the nursery showed benefits to the plant at seedling stage through to the final harvest. The seedlings grown with single and double strength Dr Grow It All in the nursery were taller and more vigorous than the conventionally grown seedlings, this was in turn reflected in final yields despite all seedlings being treated the same once planted out.”

“The use of double or single strength Dr Grow It All in the nursery produced seedlings of equal or superior vigour relative to commercially produced seedlings which, when transplanted into the field, produced higher yields than the conventional seedlings.”

Hydroponics is more than a passion...

...it's your Business!

Dr Grow It All™ is a totally natural, organic and completely SAFE liquid fertilizer for your hydroponic crops, producing higher yields, healthier and more robust plants.

Frequently Asked Questions:

What is the “Bio Soil Conditioner”?

During the manufacturing process, environmentally-friendly beneficial biota in the form of microbes are added. These combine with the soil’s micro-organisms, multiplying them by the billions to constantly condition the soil.

Why are Microbes important?

Microbes are small, single-celled organisms that occur naturally in healthy balanced soils. One single cell microbe is capable of multiplying itself 16 million times in just 24 hours. Microbes consume organic matter and through a complex process convert nitrogen, phosphorus, potassium and all the many trace minerals into a form that plants use to grow. Plants are unable to access food from the soil without microbes.

Why does Dr Grow It All™ contain carbon?

The raw material collected from organic farms contain organic compounds and wood chips. As this material composts, it releases carbon-dioxide. The addition of carbon that Dr Grow It All provides serves as an energy source for soil micro-organisms. The microbes use the carbon to build cells. Enhanced levels of carbon-dioxide are now being used in agriculture world-wide and crop increases of over 40% are not uncommon.

Why is the NPK rating so low in Dr Grow It All™?

Dr Grow It All™ is an organic liquid fertilizer —it is NOT a mineral salt or synthetic fertilizer. It’s entirely natural. The active nutrients we have in our product function over a period of time to improve your soil and help your plants to grow strong. They avoid the fast growth and flowering provided by chemical fertilizers that can result in much weaker plants that are more susceptible to attacks by diseases & pests. Therefore, large NPK numbers don’t necessarily mean a better fertilizer.
