

Replace All of the Wall Thermostats, Are You Crazy?

Problem:

Walk through most dorms at any given time and you'll find wide open windows and doors, and thermostats set to extremes. You can almost watch money fly out the window. Typical thermostats can be set between 45 and 90 degrees F, so what can you do?

Here is a crazy idea. Replace all of your wall thermostats with a thermostat designed specifically for college dorm rooms. The temperature range is factory preset for 68-78 degrees F. This provides an acceptable level of comfort, while not allowing extreme settings. By limiting the temperature range to an acceptable range, it's easy to see where you could save on your energy costs. When you spread this out over several hundred, or even thousands, of dorm rooms, it's easy to see the savings. The plain appearance and simple operation won't draw unwanted attention from those that may want to tamper.

Specs:

- Non Programmable
- Manual Changeover
- Single Stage H/C or HP
- 24 VAC
- Range 68-78 Degrees F
- Range is Factory Preset (cannot be modified)
- No Batteries required
- 4 or 5 Wire Compatible
