

FOR IMMEDIATE RELEASE

Alliance Industrial Corporation Launches New Single File Vertical Spiral

Lynchburg, VA, July 24, 2013 – Alliance Industrial Corporation (AIC). Alliance Industrial Corporation, a leading provider of conveyors and packaging machinery has launched a new Single File Vertical Spiral conveyor with smooth, continuously high throughput and flow of product in a compact footprint.

The Alliance Industrial Compact Single File Vertical Spiral is a new solution to an old problem. While serving a similar function as traditional inclining or declining alpiners, the new Single File Vertical Spiral elevates or lowers products in a compact design with a radius as small as 18 inches to conserve floor space. It is a high throughput solution with the simplicity and reliability of a traditional straight conveyor with a compact footprint that saves valuable floor space. The Spiral utilizes an innovative compact turn radius side-flexing chain to efficiently convey and elevate a wide range of container and packages with a single drive. The system is virtually maintenance-free and it handles changeovers with minimal effort.

“This is an exciting expansion to our portfolio of machinery and will allow our customers to enhance their productivity by more effectively utilizing limited floor space” said AIC’s President, Mr. Gary Garner.

Mr. Garner states that “Customer response to the new spiral has exceeded our expectations. The compact design and simplicity of the new spiral conveyor makes it a reliable and economical alternative, with many advantages over conventional elevation methods.”

About Alliance Industrial Corporation:

Founded in 1973 and celebrating 40 years of excellent business practices, Alliance Industrial Corporation is a leading manufacturer of conveyors and machinery for the beverage, container manufacturing, pharmaceutical and food packaging industries where reliability and durability are critical to prevent unscheduled down-time. AIC regularly applies their expertise to innovating conveyor and material handling solutions. Everything is designed and manufactured in the USA in our Lynchburg, Virginia facilities by over 150 highly skilled and dedicated people.
