Introduction of Flip HTML5

- Flip HTML5 is a useful digital page flip tool to create engaging page flip e-book, e-catalog, e-brochure, e-magazine and photo album from PDF, MS Office and Images. It provides stylish templates to customize the layout, custom list to design the flipbook into your style, flexible upload online and publish offline for book and back issues archived.

PDF, MS Office and Images Support

- Flip HTML5 is able to create html5 digital publication with look and feel of actual books, magazine from PDF, MS Office and Photos. It is easy to convert to content and simple to enrich the page flip book.

FLIPHTML5

- Powerful Page Editor of Flip HTML5 allows users to insert rich multimedia contents on the flip page. And the multimedia contents contain link, image, video, swf, button and more. That's a easy way to decorate flipbook and make it impressive.

Powerful Page Editor and Animation Editor

Flexible Uploading Online and Publish Offline

- There are two ways for users to upload flipbook online. One is to convert PDF to online digital publication on webpage directly. The other is to publish online with desktop version. While you are uploading it online, you are able to categorize and sort the book archived and back issue. After that, you can find the book you want much easier.

- In addition, you can publish the flipbook offline to view. There are several formats to choose such as HTML, Zip, Exe, Burn to CD, to FTP, Email to and save as plug-in.
