MISSION

“We are grateful to the people all over the world who help us create our goods”

TAMGA Designs is a collaboration between three ambitious globe trotters from different corners of the world. With backgrounds in fashion, international development, marketing and media, the team behind TAMGA has collectively travelled to more than 50 different countries for work and adventure. The brand is a reflection of their deep respect for different cultures, traditions, and the planet's natural systems that keep individuals and businesses alive.

TAMGA as a company has its roots in Dhaka, Bangladesh, where co-founders Yana and Eric spent nearly 3 years living and working. After seeing first-hand the conditions in which many fashion brands are produced, it was clear that a better way was not only possible, but necessary.

TAMGA Designs is a creator of consciously designed and produced products that reflect a **global** and **travel-inspired** lifestyle. We combine unique patterns from countries around the world with modern style that makes you feel **confident** and **connected** to what you're wearing. We are grateful to the people all over the world who help us create our goods – so we make sure they receive a living wage, safe working conditions and the opportunity to grow individually and professionally. We constantly seek new ways to lessen our impact on the environment and improve our products because we believe in a **bright future**. We know that **knowledge** inspires **confidence**, and we strive for full transparency about how and where our products are made, so you can feel more *...connected to your threads.*

It is in the TAMGA DNA to believe in a bright future and today the team is producing it's first women's collection of clothing with the world's most sustainable materials, and accountability to the people who help us create. **Join the TAMGA tribe and back us on Kickstarter!**

Dreamweaver Collection

Inspired by travels across Indonesia's beautiful islands, TAMGA's first women's collection translates the country's most stunning and exotic textile traditions into versatile, standout pieces.

TENCEL® - The majority of our clothing is made from woven and knit TENCEL®, a fibre that harnesses the power of nature to make what might be the most luxurious fabric we have ever felt. It is harvested from FSC certified Eucalyptus forests, and over 99% of the solvents and water used in producing it are recycled in a closed loop process. It's been called the 'fibre of the future' - we tend to agree.

Modal - Like TENCEL®, Lenzing Modal comes from wood - Beechwood to be exact. Austrian company Lenzing AG is at the cutting Edge of sustainable technology, and this fabric is no exception. While other Modal has contributed to clear cutting of forests and the dispersal of harmful Chemicals into the environment, this fabric is made from 100% sustainable forests with over 95% of water and solvents being recycled.

Sustainable fabrics

We use low-impact and natural dyes

Organic Cotton - Conventional cotton uses more insecticides than any other crop in the world, and is responsible for 11% of the world's pesticide usage. The impact on the health of ecosystems and the workers who pick it blew us away. TAMGA uses only GOTS certified organic cotton from Gujarat, India, that is grown without the use of harmful chemicals.

Low-Impact and Natural Dyes - Conventional synthetic dyes are some of the worst environmental offenders in the garment industry, alongside the many risks they present to human health. Recognizing that there are better options available, TAMGA gets its brilliant colours through either low-impact or natural dyes, ensuring that absolutely no harmful chemicals end up in the environment or next to your skin.
